

Yeastar Workplace is a one-stop workplace scheduling solution

CASE STUDY

A 10.1" LCD touch screen supports reserving on the spot and meeting check-ins & check-outs

The Challenge

Applelec are a Yorkshire manufacturing company specialising in Architectural lighting, backlighting solutions and bespoke signage. With 70 + workforce and 6-acres of manufacturing facilities, their main meeting room doubles as a showroom and is a hub of activity from internal meetings to client and supplier visits. Over the past year Applelec have been working to improve their internal/environmental branding, re-using and recycling many of the products they create to showcase their skills across the site, as part of their strategy to encourage more customer visits and factory tours.

Historically, Applelec used a shared calendar to book the showroom, however, they frequently found this being, forgotten or ignored and the room being occupied by people who hadn't booked it. With such an in-demand resource for the company, this set up was a frequent headache for the team, who really needed to find a solution that engaged staff in utilising it better, was simple to use but hard to ignore!

The Solution

Designed for modern offices and the future of the workplace, Yeastar Workplace is a one-stop scheduling solution for organisations to make better use of their meeting rooms, desks and other shared workspace resources.

A better meeting culture starts with scheduling. The meeting room booking system is composed of a cloud-based platform, wall mounted touch screen room displays, and smart sensors to help streamline space allocation and save in-person collaboration from unnecessary scheduling conflicts.

Looking for a place to meet? With touch screen room displays mounted outside meeting spaces, you can instantly tell the real-time room availability from distinguishable 3-coloured LED indicators even from a distance.

A 10.1" LCD touch screen supports reserving on the spot and meeting check-ins & check-outs. Custom branding is also available to set up your company logo and background image that appear on the screen.

As today's workforce gets more collaborative, how to allocate office spaces has become increasingly significant in ensuring employee experience and productivity, especially for businesses that operate in a hybrid working environment or a co-working space.

System details:

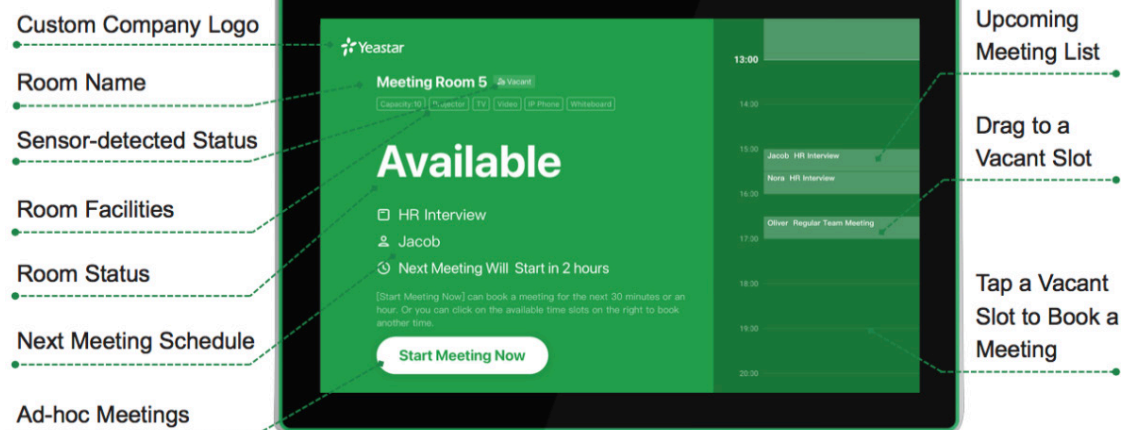

- 10.1" LCD IPS touch screen – Resolution: 1280 x 800
- Active Area: 216.96(L) x 135.6 mm(H) – 16:10 – 3-colour Side LED Indicators
- Wi-Fi: 802.11b/g/n – Ethernet: 100M/1000M ethernet Bluetooth: Bluetooth 4.0
- Power over Ethernet (PoE) or DC 12V/1.5A
- Size: 249.36(L) x 168.36(H) x 24(D) mm
- Stand mount, wall & glass mount

Efficient & Intuitive Online booking – At a glance
 status & ad hoc booking – Ideal rooms for differing
 needs – Check in & auto release – Increased
 utilisation & more insight – Outlook & Google
 Calendar integration – In depth workplace
 analytics – Notifications for different events.

CASE STUDY

Room Display

The meeting room booking system is composed of a cloud-based platform

Lacking a centralised workplace management system, organisational chaos and the waste of resources are a daily occurrence. Take meeting spaces for example. Room by room search, stolen rooms, interrupted meetings, ghost meetings, tedious tasks, and back-and-forth communication. All those and more are creating huge headaches for employees and administrators alike.

Yeastar Workplace integrates with Microsoft Outlook calendars, Google calendars and Teams or utilise the Yeastar online platform to provide a single point of entry for meeting events and room bookings. Instead of switching back & forth, you can create events, search for rooms, and make a reservation in seconds right on preferred calendar platforms.

The Results

The integration of the Yeastar booking system has been received by staff quickly, positively, and effectively. The main advantage being its visual traffic light system. Within an open office, it is easy to see from across the room if the showroom is free, in use, or if a meeting is due, based on the 3 colour alerts that surround the booking tablet. This gives instant clarity as to its availability, with minimal effort involved. Having this visual prompt directly outside of the meeting room, has improved room bookings overall. Staff can no longer just take the room without checking the calendar and feign ignorance, as it is clearly displayed on the system right before they enter the room. Being able to clearly see who has booked it and when, has prompted staff to check it, book it and respect the booking much more than our previous process. The system was easy to install, and the integration with Outlook is invaluable as we can continue booking our room in the same way we have been, and it automatically updates the booking system. We also have the back up of the web-based version of the booking system, allowing access from anywhere, which is advantageous for our Business Development Managers, who are frequently out on the road visiting customers. They are now able to access the calendar to check availability and book the room, whilst with the customer, which is both efficient and looks professional.

"We have been really pleased with the new system, it brings a level of sophistication to our showroom and has really improved the booking of such a valuable resource to our company as well as the wellbeing of staff."

Rachel Gould, Marketing Manager | Signage Division
